

Attaching Files to Appointments and Tasks On A Computer Device

ABSTRACT

File attachments to appointments or tasks are provided in a software environment such as a planner or appointment book. The attachment does not necessarily include a copy of the attached file in the appointment or task. The attachments can be implemented as links or pointers to existing documents or files in the user's file system. The present invention is particularly advantageous for portable electronic devices where the conservation of memory to store the attachments is limited.
